

UPDATE ON SPAIN

Beyond the situation we have been facing for months because of the Stevedores & Dockers discussions, Barcelona port has been indirectly impacted by the recent PETYA CYBER-ATTACK.

Maersk being hacked, it impacts APM terminal in Barcelona as it belongs to Maersk. For security reasons and solving the matter, MAERSK IT system has been down, same for APM which makes part of the Barcelona port closed till further notice.

Container truckers are not entering in port, some piers are closed and other piers are overbooked. Valencia is not better, it works with long waiting time for truckers, containers finally get in.

The situation is really critical and strikes are still maintained for the next week too.

We are doing our best to find solutions and minimize the possible inconvenience which may occur.
